WE'D  
LOVE TO  
HEAR  
FROM  
YOU.

ARE YOU A PARENT OF A  
CHILD AGED 4-14 YEARS  
WITH A DIAGNOSIS OF  
AUTISM SPECTRUM  
DISORDER OR WILLIAMS  
SYNDROME?

Our research study will explore experiences of social vulnerability in children with ASD and WS both online (i.e., on social media, or gaming etc) and offline (i.e., day-to-day, or in person). We also want to know what supports and interventions families are accessing to build their child's safety offline and online - and what are missing/needed!

Ultimately, this study aims to gather information that will inform future interventions that work to build the safety of young children with WS and ASD.

### WHAT DOES PARTICIPATION INVOLVE?

- We are looking for parents/carers to participate in a 60-minute interview with one of our researchers, as well as complete 2 questionnaires.
- Participation can be completed online or at Macquarie University.

If interested please contact:
